SURROUND

CEMINTEL®

New materials influence the way buildings are designed.

Cemintel is responding to the growing importance of external and internal cladding with Surround™.

Surround responds to the preference for high performance, lightweight materials and the desire for buildings to enhance the environment where we live.

From external façades to interior surfaces, Surround is a reinterpretation of cladding as we know it.

It's the future of building and it starts now.

THIS IS CEMINTEL SURROUND

COLOUR. TEXTURE. PLAY.

WHY SURROUND?

Panels come **trimmed and sealed** and can be installed in a horizontal or vertical orientation using the Cemintel Commercial Expresswall® fixing system, enabling the creation of endless patterns and designs.

Colour matched rivets are available to accommodate the differential movement between the building structure and the façade. They also provide a more seamless aesthetic.

Only **one rivet type** is used **for both gliding and fixing points**, making panel installation uncomplicated.

Panels have **superior weather resistance and strength** compared to other fibre cement panels of similar thickness.

Prefinished coating is highly effective in repelling water which significantly reduces the risk of delamination that may occur in freeze/thaw conditions.

Each panel has a final sealant coating applied that will **better withstand weathering** over time, as well as environmental factors like **pollution and microclimatic conditions**, such as mould/algae.

Environmentally, the European manufacturing process of air curing means **less CO2 emissions**. Panels can be **recycled** for soil conditioning and do not pose a health risk for landfill disposal.
